

Earliz Enterprise, a new Lean and Social platform dedicated to business project productivity

Based on the best of today's Lean project management practices, Earliz Enterprise incorporates a full continuous improvement process into a private and secure Enterprise Social Network.

Press embargo until September 9th 2013, 6AM

Paris, September 9th 2013

Earliz Enterprise is a **SaaS social project management platform**, joining the best of today's Lean project management methods, such as Kanban, Scrum and Agile, with a private and secure Enterprise Social Network. *Earliz Enterprise* helps increasing **project productivity**, facilitating task and planning organization, while providing each team member with the communication tools needed to optimize all daily exchanges. *Earliz Enterprise* fully adapts to current project management processes and helps managers **saving time and enhancing project reactivity** while providing follow-up metrics calculated using team activities, in order to monitor in real time project progress and commitments.

Designed to implement easily a continuous improvement process into business projects, from task management to priority adjustments, *Earliz Enterprise* gathers in one place:

- **A full Enterprise Social Network**, to share documents online, and to help team members to communicate immediate issues with the entire project community: blog, forum, chat, comments... *Earliz Enterprise* provides tools to easily conduct cross-companies projects with clients or vendors, or to invite external stakeholders (clients, investors...) to monitor project progress.
- A SaaS application that **fully adapts to all project management processes**: using task lists, iterating sprints with a Scrum/Agile approach, or defining milestones and deadlines.
- **Follow-up metrics automatically calculated online** based on team daily activities. Thanks to these dashboards, managers and teams can ensure that they meet their delay and quality commitments, adjusting in real time the different aspects of their project:
 - **Progression charts**, including an estimate of the project/milestone/sprint completion date, depending on the observed team productivity,
 - **An analysis of the overall velocity** for each project phase,
 - A visualization of **employee workload** in the past 7 days, the current month or the following month,
 - An overview of **work distribution** over the last 7 days, the current month, the previous month or by sprint/milestone.

Earliz Enterprise, is available in four languages and directly on www.earliz.com: 1 month-free trial, no commitment or credit card required, then 3 € / month / user by 10 users-bundle.
